INTRODUCTION

IT IS WITH GREAT PLEASURE THAT WE HAND YOU THIS, OUR FIRST STEEL Ceiling Catalogue. On the following pages we show Greek, Empire, Rococo, Renaissance, Colonial, as well as modern styles of architecture. Being the pioneer manufacturers of Steel Ceilings in the west, and with a knowledge of the business extending over a period of many years, we solicit your patronage. Our location will be of advantage to our customers in getting Steel Ceilings promptly. We offer you nothing but first class goods at reasonable prices. We are constantly adding new designs and many combinations of designs can be made which we are unable to show in this limited catalogue. We believe the simple construction we show making the best joint possible will appeal to architects, builders and others. Our motto: "GOOD GOODS, REASONABLE PRICES, PROMPT SHIPMENTS."

NEVADA, MISSOURI.

INSTRUCTIONS FOR APPLYING.

FURRING FOR FLAT BACK PLATES.

STRIKE chalk line through center of room lengthwise, then strike lines 6-inch centers so that they are parallel with the center lines of the nailing beads on the plates, as shown in blue print. On these lines, nail $\frac{7}{8}$ x $\frac{7}{8}$ inch furring strips. Nail strips in angle of ceiling at wall and at a distance from the wall equal to the projection of the cornice to receive the cornice brackets. One wood bracket is furnished with each section of molding or cove. Bring the strips to a uniform depth by driving wedges between the strips and the old ceiling or joists, otherwise the ceiling will present an uneven appearance when completed. Begin applying ceiling at one end of room in center, placing plates as shown by blue print, working both ways to sidewall. The Field should be applied first, then the Cornice and finally the Mold, Border or Filler as the case may be. Close or "swedge" with a small dull tool any joints which may not have been lapped tightly owing to the lapping beads having been bent or flattened in applying. It is well to nail two or three nails to the plate when starting so they can be drawn in case Ceiling is not started straight. Flat back plates may be applied to sheathing, in which case no furring strips will be required, but the sheathing should be level.

FURRING FOR PANELS DEEPER THAN $\frac{1}{4}$ INCH.

Nail furring strips the length of the room, as for flat plates, carefully leveling them with wedges. Then nail other strips at right angles on top of these, at distances from center to center equal to the distances between centers of the nailing beads of the panels, as shown on the blue print. Nail "headers" or cross strips at right angles to the last strips and on top of the first strips applied. This will bring all strips to the same level. To bring the cornice to the level of the ceiling nail one strip on top of another in the angle between the ceiling and the wall and at a distance from the wall equal to the projection of the cornice.

Double or Cross Furring.

The list prices in this catalogue are for the plates, moldings, etc., given one coat of white paint on both sides before shipping and include brackets and nails for applying. If strips are required we will furnish $\frac{7}{8}$ x $\frac{7}{8}$ inch furring at 50 cents per 100 square feet of ceiling.

STRIPS WILL NOT BE SHIPPED UNLESS ORDERED.
